User: bexsero brand x 1/9 brand x 2/10 tetanus brand y 3/11 mild rash child is 13 next shot

Response of OpenAI-o3

It looks as though you are trying to work out when the next vaccine is due... Below is a guide ...

Rash after the tetanus-containing shot:

• A localised or mild generalised rash without other serious features is not a contraindication to future immunisations. Let the vaccinator know so they can observe the next dose for 15–30 minutes.

Bottom	line /	what to	do	no

Response of Qwen3-32B+MuSeR (Ours)

Quick answer for a 13-year-old who has had only the

What I still need to know to fine-tune the plan:

...

first two doses of Bexsero ...

How long did the rash local reaction and not a sign shot, and was it treated? of hypersensitivity.
